

CK REGEON

Science-based cosmetic scalp and hair care — Korean biotech company: HAIRREGEON and HERIBON brands

Biotech company, founded in 2016

"WNT ON" technology (CXXC5 / Wnt signaling)

Publications in JID (2017) and BJP (2021)

Two brands: HAIRREGEON and HERIBON

Cosmetics brand launch — 2025

ABOUT THE COMPANY

CK Regeon Inc. is a Korean biotech company founded in 2016 in Seoul (Yonsei Engineering Research Park). The company is led by Professor Kang-Yell Choi, a researcher of the Wnt signaling pathway with more than twenty years of scientific experience. The company's cosmetics brand portfolio is united under the name DermaRegeon.

Products are built around the company's proprietary "WNT ON" technology: the components KY19382 and hesperidin, along with the PTD-DBM peptide, aimed at modulating the Wnt/ β -catenin signaling pathway via the CXXC5 protein. The mechanism is described in peer-reviewed publications — Journal of Investigative Dermatology (2017) and British Journal of Pharmacology (2021).

Important for accurate communication: the published research is preclinical in nature (cell cultures, ex vivo, and animal models) and describes the mechanism of action of the components, not proven clinical efficacy of finished products. The products are positioned as cosmetic scalp and hair care.

COMPANY BRANDS

HAIRREGEON

A professional intensive scalp care line. The flagship product is the PTD-DBM Hair Booster: a two-component set (lyophilized powder and solvent), packaged in boxes of five sets.

HERIBON

A daily home-care line, "WNT ON," in four steps: shampoo (500 ml), scalp scaler (300 ml), hair care mask (250 ml), and scalp tonic (50 ml).

TECHNOLOGY AND SCIENCE

"WNT ON" technology

The company's proprietary development based on the components KY19382 and hesperidin, aimed at modulating the Wnt/ β -catenin signaling pathway via the CXXC5 protein.

PTD-DBM peptide

A component of the professional HAIRREGEON line. Its competitive CXXC5-binding mechanism is described in a Journal of Investigative Dermatology (2017) publication at the preclinical level.

Scientific foundation

Mechanism studies are published in peer-reviewed journals: Journal of Investigative Dermatology (2017) and British Journal of Pharmacology (2021). The work was performed on cell cultures, ex vivo, and animal models.

CERTIFICATES AND REGISTRATIONS

As stated by the company. Copies of supporting documents and registrations are provided at the deal stage. Registration or listing is not a regulatory approval.

PRODUCT FORMATS

Ampoules and boosters

Shampoos

Scalp scalers (scalp exfoliants)

Hair masks and treatments

Scalp tonics

EXPORT AND MARKETS

The company is building international distribution for its cosmetics brands, launched in 2025, and takes part in industry trade shows in Asia. Territories, current distributors, and market-specific terms are clarified at the deal stage through Teranova.

Prices and terms are indicative and are clarified at the deal stage through Teranova. Direct manufacturer contacts are not published. Products are presented as cosmetics; the described research relates to the mechanism of action of the components and is preclinical in nature.
