CAYCLLY

Clean beauty built on a fermented berry and a delivery patent

Korean clean-beauty brand with two proprietary complexes, a registered delivery patent and third-party clinical results: twelve products across hair, face and body, with Italian V-Label certification on the full skincare line

About the company

CAYCLLY CO., LTD. is a Seoul company founded in 2023 and based in Gangnam-gu. It describes its own field as clean beauty and slow aging: daily-use cosmetics built on nature-derived ingredients, with the claims tied to laboratory and clinical work rather than to a story. Formulation is done by an in-house team, and production runs at a GMP-certified partner facility.

The brand rests on two proprietary developments. The first is Redbarrier™, a complex the company puts into every product of its skincare line. The second is Pressome™, a delivery technology protected by a registered Korean patent, which the company uses to carry actives deeper into the skin. Both are described below in the company's own terms.

The range is unusually broad for a company of this age: twelve products in four lines. Hair and scalp care is three products, the skincare routine is five, specialty care is an eye cream and a sun cream, and body care is two. The lines are built for different buyers and are not variations of one another.

The certification approach is worth a separate note. For its skincare line the company did not take the domestic vegan route but obtained Italian V-Label certification, naming each product individually. Hair and body care carry Korean vegan certification instead. These are different certifying bodies with different international weight, and this profile names them separately rather than merging them into one badge. All figures, test results and registrations below are the company's data.

CAYCLLY CO., LTD., Gangnam-gu, Seoul. Founded in 2023

In-house formulation team; production at a GMP-certified partner facility

Two proprietary complexes: Redbarrier™ and Pressome™

Pressome™ delivery technology, Korean patent 10-2164218

Clinical results for Redbarrier Cream from Tru Skin Clinical Trials Center, Seoul, March 2024

Italian V-Label vegan certification on seven skincare products, valid to 20 March 2027

Anti-hair-loss shampoo registered with the Korean MFDS as a functional cosmetic

Six active export markets: Korea, USA, Japan, the European Union, Indonesia and the Middle East

Written consent to publish this profile received on 13 September 2026

Product lines (1/2)

Hair care

The line the company put forward first for international markets, and the one built on its own fermentation work. The Calming Beer Yeast Shampoo, 500 ml, is registered with the Korean MFDS as a functional anti-hair-loss cosmetic and carries Korean vegan certification. The Seed Oil Hair Essence, 200 ml, is a leave-in treatment on nine seed oils with an allergen-free fragrance. The Beer Yeast Collagen Treatment, 500 ml, is a conditioning mask at pH 5.5. The company states its claims for the treatment carefully, without figures, and it is the one product in the line that does not carry a vegan mark.

Redbarrier skincare

Five products covering a full routine: a gel cleansing foam with four exfoliating acids and colloidal oat, a toner, an emulsion, an ampoule serum on four peptides and the cream on which the clinical work was done. Four of the five are registered in Korea as dual-functional cosmetics for brightening and wrinkle care. All five carry Italian V-Label certification with individual reference numbers.

Product lines (2/2)

Specialty care

Two products for separate tasks. The Peptalogy Multi-Action Eye Cream is built on four peptides with tranexamic acid and glutathione, and passed an eye stimulus test, which the company notes makes it suitable for contact lens wearers. The Glutathione Glow Sun Cream is SPF 50+ PA++++, registered as a triple-functional cosmetic, combines organic and inorganic filters and carries a reef-safe mark: no oxybenzone or octinoxate.

Body care

A shower gel and an emulsion on Jeju hinoki cypress water at a stated 50 000 ppm, with ceramide and panthenol. Both are rated EWG green grade by the company and carry Korean vegan certification. The emulsion adds shea butter and an allergen-free grapefruit fragrance.

Capabilities and manufacturing (1/3)

Redbarrier™ complex

The company's own complex, present in every product of the skincare line. It is built in two halves: the red half is Nobleberry™ with astaxanthin, the barrier half is panthenol with ceramide. Nobleberry™ is double-fermented, with black yeast and lactobacillus; the company states it contains fifteen times more saponins than ginseng and that it inhibits collagen degradation. For astaxanthin the company states antioxidant activity six thousand times that of vitamin C. Ceramide, in the company's description, forms lamellar lipid layers that mimic the skin's own structure.

Pressome™ delivery, patent 10-2164218

A cationic liposome registered as a Korean patent. The idea is electrostatic: the carrier holds a positive charge and the stratum corneum a negative one, so the carrier adheres to the surface more strongly and takes the actives deeper. In the company's own fluorescent penetration assay the cationic liposome showed the highest absorption, ahead of neutral and anionic liposomes and far ahead of a plain aqueous solution. The company notes that results vary by active ingredient and skin condition.

Capabilities and manufacturing (2/3)

Clinical results for Redbarrier Cream

Carried out by an independent third party, the Tru Skin Clinical Trials Center in Seoul, in March 2024. The company reports a 296.5% rise in surface hydration after a single application and a 362.5% rise at the tenth skin layer, a 102% improvement in transepidermal water loss on physically damaged skin and a 95% improvement in the damaged barrier measure. In the post-trial questionnaire all nine quality and efficacy metrics were rated at maximum satisfaction. The number of participants and the protocol are not stated in the materials we hold; they are requested from the company at the deal stage.

Brewer's yeast for the scalp

The shampoo is built on brewer's yeast extract at a stated 500 ppm. The company describes it as carrying eighteen amino acids and forty-nine times the protein of bananas, absorbed into the hair shaft and root. Alongside it the formula carries lactobacillus ferment lysate for the scalp microbiome and sixteen botanicals the company rates EWG green grade, with no red or orange grade ingredients. The combination is the subject of a Korean patent application, 10-2024-0027315, filed under the name Calming Beer™ Scalp. This is an application, not a granted patent.

Capabilities and manufacturing (3/3)

Vegan certification, named by body

The skincare line holds Italian V-Label certification, issued by V-Label Italia and approved by Associazione Vegetariana Italiana, with seven products listed individually under reference numbers 1771 to 1777/2024 C-KR and validity to 20 March 2027. Hair and body care carry Korean vegan certification instead, KIVAC for the shampoo. The company itself describes domestic certification as strong locally and weaker internationally, which is why the two are named separately here rather than shown as one vegan badge.

Formulation standards

The company states that its products contain no parabens, sulfates, petroleum derivatives, synthetic dyes or triethanolamine, and that fragrances in the hair and body lines are certified allergen-free. Skincare products are dermatologically tested for irritation, and the company states its ingredient standards are suitable during pregnancy. Packaging uses recyclable glass and PCR containers with FSC-certified paper printed in soy ink.

Product catalog

Twelve products in four lines: hair and scalp care, the Redbarrier skincare routine, specialty eye and sun care, and body care. Images and descriptions are taken from the company's materials, provided on 13 September 2026 together with written permission for their use.

Export and markets

The company states six active markets. In Korea the products sell through Naver and Coupang with an active marketing campaign. In the United States they are listed on Amazon, with FDA MoCRA registration completed. In Japan they sell through Qoo10 with a promotional campaign running. For the European Union CPNP registration is completed. Indonesia is registered for e-commerce. In the Middle East the company works through an exclusive distributor covering Kuwait and the GCC under an export agreement. Latin America does not appear among the company's current markets, and the commercial terms passed to Teranova were prepared specifically for this region. Territories are confirmed with the company on a specific enquiry.

Product formats

Shampoo, leave-in hair essence and conditioning treatment

Cleansing foam, toner, emulsion

Ampoule serum and cream

Eye cream

Sun care SPF 50+ PA++++

Body shower gel and body emulsion

Terms of cooperation (1/2)

Forms of cooperation

Wholesale supply of finished products under the CAYCLLY brand. The company works with distributors, professional channels and retail.

Territory

An exclusive distributor is in place for Kuwait and the GCC. Other markets are confirmed with the company on a specific enquiry through Teranova.

Minimum order

The company states a standard minimum of one thousand units per item, and for a first purchase order an introductory quantity of five hundred units per item may be accepted.

Price

The company passed its export price list to us as confidential, and it is not published. Terms are shared with a qualified buyer in connection with a specific enquiry through Teranova. Delivery basis FOB Korea.

Lead time

Approximately two weeks when stock is available, and approximately ten to twelve weeks when new production is required. International transport time is additional.

Documents

Vegan certificates, MoCRA and CPNP registrations, the delivery patent and the clinical report are provided separately, for a specific market or a qualified buyer.

Terms of cooperation (2/2)

Languages of communication

English and Korean.

Prices and terms are indicative and are finalized at the deal stage via Teranova. The supplier's direct contacts are not published. Registration references (EU CPNP, US MoCRA) are stated per company data and do not constitute regulatory approval.
