EXOLUNA

Exosomes made in-house — from raw material to finished product

A Korean biotech company from Yongin: its own exosomes, the EXOLUNA brand — scalp care, a clinic set and activators for aesthetic salons

About the company

RNH BIO is a Korean biotechnology company based in Yongin, Gyeonggi Province. Its speciality is exosomes: the company produces them with its own Multi RN-Exosome technology and works in two roles at once. It owns the EXOLUNA brand of finished products and at the same time supplies the exosomes themselves as a raw material to those who develop formulations.

The exosomes come from two origins. The plant ones are obtained by upcycling — from material that would otherwise be waste: Japanese hop, coffee fruit, camellia fruit, peppermint, rice, five species of seaweed. Milk exosomes stand apart. The combinations differ from product to product, each chosen for its own task.

There are three product directions. EXOLUNA is the retail scalp care line. EXOLUNA RX PRO is a set for clinics. LUNA RN-Exosome Activator is a range of activators for aesthetic salons, in two tiers, basic and premium. One thing is common to all: the exosomes are supplied freeze-dried and activated immediately before use.

Product lines

EXOLUNA Scalp Booster

The retail scalp care line. A 60 ml ampoule and a freeze-dried activator, mixed before use. The company states a complex of four plant exosomes — Japanese hop, coffee fruit, camellia fruit and peppermint — together with biotin, amino acids and the functional ingredients MELTANE and caffeine. Use once a day in the evening.

EXOLUNA RX PRO

A clinic set of two vials: 2 g of freeze-dried exosomes and a 2 ml activating ampoule. A dual exosome system — milk and camellia fruit. The company positions it for use immediately after procedures, including MTS and laser. Stated purposes: recovery, tone, firmness.

LUNA RN-Exosome Activator · Professional Basic Line

Two activators for salons. Brightening & Firming — milk and camellia exosomes, working on tone and firmness. Scalp Booster — Japanese hop and coffee exosomes, working on scalp and hair.

LUNA RN-Exosome Activator · High-End Special Line

Four EXONOVA activators for specific tasks. PDRN Repair on five-seaweed exosomes. White Glow on rice and milk exosomes. EGF Firming on camellia and coffee exosomes. Noggin Scalp on Japanese hop, coffee, peppermint and camellia exosomes.

Formulation, concentrations and testing (1/2)

Multi RN-Exosome

The company's own technology. Exosomes are obtained from plant material by upcycling and from milk, and they go into finished products as complexes of several types rather than one at a time.

Freeze-dried plus activator

The exosomes are supplied dried in a vial, the activating ampoule comes separately, and the two are mixed immediately before use. The format was chosen for stability: once prepared, such a system does not keep for long. For a buyer that means specific storage requirements and staff training.

Formulation, concentrations and testing (2/2)

Results stated by the company

The company gives the following figures. In an experiment on dermal papilla cell culture it obtained an increase in proliferation exceeding the result of minoxidil; it describes the component itself as 20–40 per cent more effective. HDF cell viability by the CCK8 method rose by 50 per cent with milk exosomes added. The antioxidant activity of camellia exosomes by the DPPH method proved 14 times higher than that of blueberry. Separately the company reports an AI-analysis test: after a week of use, changes in hair growth rate and in the number of hairs per follicle opening were recorded. All of the above is the manufacturer's own data, obtained on laboratory models and in its own tests. These are not clinical trials of the finished product on people. Permitted wording on a label depends on the market, and comparison with a medicinal product is not allowed everywhere.

MoCRA registration

For the EXOLUNA line the company states a completed registration under the US MoCRA regime. A registration confirms that the market-access procedure has been carried out; it is not a confirmation of efficacy.

Product catalogue

Three concentrated ampoules in the Drop series: tone and pigmentation, barrier and renewal, hydration and soothing. Each carries one key active at a stated concentration. Price on request.
