VENDERMA

Exactly what the skin actually needs

Korean derma skincare built on exosomes, peptides and fermented actives: care for blemish-prone, ageing and pigmented skin, plus a device for treatments at home

About the company

BIOPT Co., Ltd. is a Korean company that develops and manufactures derma skincare under its own brand, VENDERMA. The brand name is built from the three words the company uses to describe its work: Vital, Effective, Necessary. The idea behind them is plain — give the skin exactly what it needs, and prove the result with testing rather than promises.

The company is led by Han Sang Hee. From January 2012 to October 2023 he was Executive Director of global product planning and overseas sales at DERMAFIRM Co., Ltd. According to the company, revenue there grew from 500 million KRW to 100 billion over those years, he took part in more than seventy international exhibitions, and he received the government export awards One Million Dollar Export Tower in 2017 and Fifty Million Dollar Export Tower in 2022.

BIOPT's own history began in 2024. In February the company opened a corporate research institute registered with the Korea Industrial Technology Association, and in March the first VENDERMA line appeared — Red Calming Cica Exosome, built on Centella exosomes. Sparassis crispa exosomes followed, and with them the anti-ageing line. The company holds ISO 9001, is certified as woman-owned, and has been officially recognised as a venture company since September 2025.

Product development is done in-house, while the raw material side is shared with OptBio Co., Ltd. — a bio-material producer working since October 2020 on a 20,000 m² site in Gangneung. The two companies are registered as joint inventors and file patents together.

Own brand VENDERMA: development, manufacturing and distribution

Corporate research institute since February 2024

ISO 9001; venture company status since September 2025

2025 patent application for a compound derived from Sparassis crispa

OEM contract with a buyer in Australia: 60,000 units shipped during 2025

Buyer network in more than twenty countries

Product lines

Red Calming Cica Exosome

The brand's first line, launched in March 2024. It is aimed at skin prone to breakouts, redness and irritation; the company puts its buyer between 15 and just over 30. The formula rests on Centella exosomes, sulphur, Scutellaria baicalensis root extract, Houttuynia cordata and witch hazel, with four essential oils added: tea tree, lavender, eucalyptus and hinoki. Six products: a deep cleanser 150 ml, a toner essence 150 ml, a spot oil 10 ml, a two-week programme set, a soothing cream 50 ml and an SPF 50+ PA++++ sunscreen 50 ml. Several are vegan. According to the company the products passed suitability testing for acne-prone skin, and the cleanser recorded zero irritation in a sensitive-skin test.

EXO REJUVA Ultra Lifting

The anti-ageing line, built on Sparassis crispa exosomes and extract, gold and diamond colloids, five peptides and the ELA Biome fermented complex. The company recommends it for wrinkles, firmness and facial contour, including alongside device treatments — iontophoresis, EMS, electroporation and MTS. The line holds a serum 50 ml, a cream 50 ml and a gentle gel cleanser 100 ml; the serum and cream are vegan-certified.

EXO REJUVA Mela-C

The line for pigmentation and dullness, for melasma-prone and uneven skin. A Mela-C Power Serum 50 ml with niacinamide, a Mela-C PDRN Cream 50 ml, and the Diamond Glow Cushion 15 g with SPF 50+ PA++++ and gold and diamond colloids. The company's own trial figures are set out below, in the section on its approach.

ERI-Pro

A home-care device shaped after the traditional gua sha tool. One button switches three modes: EMS for facial muscle tone, electroporation to carry actives deeper, and galvanic current. It also works as a plain massager — for the face, the scalp and lymphatic drainage. The company suggests using it together with the Ultra Lifting serums.

Approach and manufacturing

Exosomes

Carrier vesicles that deliver actives into skin cells and protect them from breaking down on the way. The company works with two sources: Centella exosomes for the calming line and Sparassis crispa exosomes for the anti-ageing one.

Sparassis crispa

The mushroom known as cauliflower fungus. According to the company it holds the highest beta-glucan content among mushrooms — 43 per cent. In March 2025 a patent application was filed for a compound isolated from it which, the company states, supports antioxidant activity and collagen formation.

Peptides and fermented actives

Five peptides in the anti-ageing line, including acetyl hexapeptide-8. The ELA Biome fermented complex is drawn from seaweed, ginseng, mushroom, soy and rice put through controlled fermentation.

Gold and diamond colloids

According to the company the diamond colloid works as a delivery system carrying actives deeper into the skin, while the gold colloid raises conductivity — which is why the line is recommended together with device treatments.

In-house testing

The company backs its claims with clinical tests and publishes the figures. For the Mela-C line: pigmented area reduced by 16.12 per cent after four weeks and by 20 per cent after eight, in a trial on twenty participants aged 30 to 50. For the Ultra Lifting serum and cream the company states wrinkle improvement of 120.23 and 122.53 per cent respectively. All figures are as declared by the company; testing conditions and protocols are requested at the deal stage.

Export and markets

According to the company its buyer network covers more than twenty countries, running both B2B and B2C, including the Amazon, Coupang, Lazada and Qoo10 marketplaces. In August 2025 an OEM contract was signed with a buyer in Australia, and 60,000 units shipped over the year. Through Teranova the company is open to Mexico and the countries of South America — these are the markets agreed as the scope of cooperation.

Certifications and registrations

ISO 9001

ISO 9001 is declared by the company. Its corporate research institute was registered with the Korea Industrial Technology Association in February 2024, venture company status was granted in September 2025, and the company is certified as woman-owned. Copies of the documents and confirmation of current status are provided at the deal stage through Teranova.

Terms of cooperation

Forms of cooperation

Wholesale supply of finished VENDERMA products; OEM and ODM development under the buyer's own brand, with formulas chosen for the climate and requirements of the destination country.

Territory

Mexico and the countries of South America.

Prices

Price on request. We do not publish the export price list: current prices and delivery terms reach the buyer at the deal stage through Teranova.

Minimum order

The minimum batch depends on the product and the form of cooperation. The company quotes against a specific list — the request goes through Teranova.

How it works

Enquiry → verification and coordination by Teranova → negotiation and samples → logistics, customs and payment handled end to end.

Prices and terms are indicative and are finalized at the deal stage via Teranova. The supplier's direct contacts are not published: Teranova Group handles negotiations, due diligence and delivery support.
